Meeting 11.05.2018
Python-based Paraview postprocessing

Participants
- Jomo, John
- Wassermann, Benjamin
- Oztoprak, Oguz

Content
- Further discussion on vtu file structure
- The possible contents of the presentation

Tasks
- Select some cells in paraview and try to find the method that gives the ID's of the selected cells. Cell selection method could be by mouse or by plane (i.e. the cells that intersect with a plane of choice).
- With the ID's known we can find all the info about those cells and share them with AdhoC if need be.
- A simpler vtu file will be sent to us to work on.

Next meeting
- 17.05.2018 @ 10 am
